DANIELS PLANTING GUIDE - 1946 -

A Complete Discussion of the
Best Hardy Plants for the
Northwest with Helpful Hints
for their Planting, Culture
and Maintenance

Compliments of
The Daniels Nursery
FRANC P. DANIELS, Prop.
Hennepin County's Largest Nursery
Long Lake, Minnesota

OUR 33d YEAR AT LONG LAKE

From a very modest start in 1914 we have gradually grown into our present enviable position of Hennepin County's Largest Nursery and a leader in the field of landscape work and services.

You, as a prospective purchaser of Nursery stock and landscape services, will be interested in what

WE OFFER YOU . . .

NURSERY STOCK—The product of our 150 acres of fertile Minnetonka soils, stock possessing those rare qualities possible only when produced by plantsmen skilled through years of experience. Our growing season during 1945 was one of the most favorable we have ever had, and as a result our plants this year are superfine.

EQUIPMENT AND STAFF—A complete equipment for the efficient operation of our landscape services—including a fleet of 12 cars and trucks, 2 power sprayers, tree movers, and motorized equipment for grading, mowing, etc.—and a staff ("white collar" and skilled gardeners) assure our clients of complete satisfaction in our landscape planting and service operations.

PERSONALITY FACTOR—The Daniels Nursery is operated by Franc P. Daniels. These facts about him will explain in part the widespread customer confidence in our nursery: 37 years of Horticultural work; 33 years operating The Daniels Nursery at Long Lake; 23 years part time lecturer on Horticultural subjects at the Minnesota School of Agriculture; 14 years President Minnetonka Fruit Growers Association; 3 years President Hennepin County Agricultural Society; 2 years President Minnesota State Horticultural Society; 33 years an extensive fruit and vegetable grower; author of the Northwest's leading book on Horticulture and Gardening for the Northwest.

CAN YOU AFFORD TO BUY WHERE STOCK, EQUIPMENT AND PERSONALITY FACTORS ARE LESS FAVORABLE TO YOU?

Now, as for the last thirty-two years our **Satisfied Customer Policy** pledges us to place the interest of our customers above everything else. If you order one plant or a complete landscape development we will see that you receive the fullest possible satisfaction.

Visitors Are Always Welcome At Daniels

We are only twenty-three minutes from Minneapolis (at thirty-five miles per hour). Follow Wayzata Boulevard (Highway No. 12) to Long Lake, then just one-fourth mile south. Here you'll find acres and acres of the finest nursery stock in the Northwest . . . trees, shrubs, evergreens, perennials, and fruit plants . . . everything for planting the home grounds.

Come, browse all you wish, and we're sure you'll enjoy your visit. We think that you will truly marvel at the tremendous acreage and the high quality of our plants.

And if you want to buy, fine! We'll do our best to serve you to your complete satisfaction.

But come anyhow—you'll always be welcome.

DANNY SAYS:

Why not crank up the "ol' bus" and drive over to see us? It's not so far . . . and you'll enjoy both the ride and the visit.

Nineteen years ago we introduced to you this little mythical
"member of the firm"

LITTLE DANNY DO-IT
The Horticultural Hustler

DANNY SAYS:

For 19 of the 33 years that the boss has been operating The Daniels Nursery at Long Lake, I've been bustling around helping him. In all those years I've never seen a time when planting was more a "MUST"—or when the need for high quality makes Daniels' Stock a more important "MUST" for the careful planter.

1946

As we, as a nation, reconvert from war to peace we are undergoing many changes—but Horticulturally two important facts or needs remain as true as ever—

1st.—We all have an inherent love of the beauties of nature, and most of us like to express that appreciation by beautifying our home grounds with nature's loveliest plants. Truly, "It is not a home 'til it's planted," and the more one plants, the more beautifully one's property is developed, the more enjoyment his home gives him.

2nd.—Fruits have become an essential part of our diets both from a health point of view and the pleasure of eating them. Fruits in general are scarce and will stay so for some time. Acreages have decreased. For pleasure, economy and more bountiful living why not "Grow Your Own."

This is the 33rd year that it has been my privilege to provide quality plants for the prospective planter. To say that this task has been a pleasure is "putting it mildly." One of my greatest joys in all these years has been to watch the development of these plantings into enduring beauty and fruitfulness.

Again this year we offer you plants . . . all of those that we consider best and hardiest for our northern conditions. All of the skill and "know how" that 37 years of Horticultural work has brought to me has gone into the development of these—and I am well satisfied.

I am sure that you, as a purchaser of them will be just as well satisfied—not only with them as nursery stock—but with the vitality in growth and production that they will bring to you.

I trust that we may have the privilege of serving you this year.

DANNY SAYS:

Since my first Birthday (18 years ago) I have been the Boss' constant companion in "getting out" the catalogs and other publications. Last year I "took the bull by the horns" and wrote (perhaps with a little help from the boss) a little garden guide entitled "Danny's Pewee Primer of Horticulture." If you haven't got a copy I'd like to have you write to me for one. It's a little 32 page booklet—but "Zowie!" how much helpful information it contains! I think you'll enjoy and profit by reading it, and will use it for later reference.

Why not send a postal for a free copy to-day?

THE DANIELS NURSERY

Part I
 Daniels
 Choice
 Ornamental
 Plants
 and
 Plantings

It Has Been Truly Said—

"It's Not a Home 'Till It's Planted"

With most people, that is an accepted fact. True, also, is it that no spaciouly placed public office or commercial building is a "finished" edifice until it, too, has been well landscaped.

The Daniels Nursery offers you truly dependable nursery stock and design and planting service.

OUR LANDSCAPE SERVICES FOR 1946

Through careful, conscientious, economical performance we have long enjoyed an enviable reputation for the furnishing of the following landscape services and materials:

Landscape Design and Plans
 Planting of Nursery Stock
 Shrub Trimming
 Tree Trimming and Care
 Tree Feeding

Tree Spraying
 Lawn Building and Renovation
 Stone Walls and Walks
 Rockeries and Pools
 Dirt, Peat and Fertilizers

Eradication of Lawn Weeds and Poison Ivy through the use of Hormones and Chemicals (Please turn to page 8)

This year, for the first time since Pearl Harbor, we are moving part way back to normal in our service abilities. However, manpower is still short, demands for landscape services are increasing and it again seems probable that we may not be able to serve our clientele as well as we could in pre-war days.

However, we will do the best we can. We will greatly appreciate your patronage and we will do our utmost to provide all the services our friends call upon us for.

As usual we can serve those best who plan with us early—preferably before the first bluebird arrives.

DANNY SAYS:

Beauty may be only skin deep but the home grounds properly planted with Daniels ornamentals has a powerful thick skin. And remember—"it's not a home until it's planted."

A SUGGESTION TO POST-WAR PLANNERS . . .

- Are you planning to build as soon as practical?
- Are you going to "go" suburban or rural?
- Have you given proper thought to approaches, parking, snow clearance and disposal, and the many other problems that are foreign to the urban dweller?
- Do you realize that much can be wisely done in advance of actual construction that will be most advantageous later on? Then, too, necessary care can be given to existing plants, and certain new plantings may be put in now, thereby saving much time in growth development.
- Naturally you have consulted an architect regarding your house plans. May we suggest the wisdom of consulting us regarding your "grounds development" problems?
- Do you know that we will be glad to discuss your "grounds development" with you, on your new premises, and to give you helpful suggestions and counsel **without charge or obligation**? We'd like to meet you, and we are sure you'd like to get acquainted with us and our program of helpfulness.
 - For many years we have specialized in the development of suburban home grounds. We can proudly show you some of our outstanding projects in the Minnetonka and Rural Hennepin areas. We believe that you will agree with us that our experience and "Know-how" enable us to offer you much more than average assistance for your future development.

Early June—Planting Completed

DANIELS PLANTINGS GIVE QUICK RESULTS

The photograph on the left shows a complete landscape job just finished—grading, planting, seeding, walks, and drive.

The picture below shows the same development only two and one half months later—a striking tribute to Daniels' quality plants and landscape service—and to good maintenance after planting.

Late August—2½ Months Later

Food For Thought For Every Home Owner

Into your home's construction and interior appointments will go careful planning and the help of acknowledged experts in their respective fields. Does not your landscape planning, the choice of materials and the selection of the actual plants deserve just as careful thought as the house and its interior?

DANNY SAYS:

Painting the landscape with colorful trees, shrubs and flowers is a kind of artistry that everyone can enjoy.

DANIELS HARDY SHRUBS

Ornamental shrubs are the backbone of all landscape planting. Whether one is building an outdoor living room, constructing a foundation planting, or making other border plantings, hardy shrubs are indispensable. Much beauty and individuality may be secured through the varying heights, forms, flowers, barks and foliage of the different varieties.

Of the hundreds of different shrubs, the ones we are growing have proven themselves the cream of those suited to the Northwest. Every one has its special merit. By selecting the proper assortment for each situation one can build oneself a home landscape of surpassing charm and beauty.

Our plants are infinitely superior to the so-called "bargain" shrubs so frequently offered where one has no assurance of size and quality, but is simply offered some meaningless description as "2-year-old," double X or triple X. The plants we offer are all transplanted, well grown specimens, with good tops and roots—unusually fine plants for the price.

MOCK ORANGE VIRGINALS

FRENCH HYBRID LILACS

The Garden's Most Gorgeous
Flowering Shrubs

Lilacs have long been considered one of the finest of flowering shrubs. They come early, when we seem more than ever appreciative of garden bloom, they are so fragrant, they are most colorful, and they are produced in such generous amounts.

These marvelous French Lilacs have all the good points of the other older sorts but produce such tremendous blooms of such beautiful and varying colors that they are definitely in a class by themselves.

No yard is complete without a planting of several French Hybrid Lilacs. They are absolutely "tops" in the flowering shrubs.

Six of the Best French Lilacs

BELLE de NANCY—Double. Rose pink. **Mme. Le MOINE**—Double. White.
CHAS. JOLLY—Double. Dark purple. **Pres. GREVY**—Double. Clear, soft blue.
MARIE Le GRAY—Single. Pink to lilac. **RUBRA de MARLEY**—Reddish purple.

For Lilac Prices See Page 7.

**TWELVE
OUTSTANDING
SHRUBS
That Everyone
Should
PLANT
MORE
FREELY**

SPIREA ANTHONY WATERER

BARBERRY (Red Leaved)—2 ft. First foliage a warm bronzy red; the heat of the summer intensifying its red brilliancy; autumn adding other tints to its richness. Abundant scarlet berries persist through winter along the spiny twigs.

COTONEASTER (Integerrima)—5-6 ft. Is of bushy, rounded form with short stiff branches and red berries. Has a strikingly horizontal manner of growth. Hardy north into Canada. A distinctly different shrub of real value.

DOGWOOD (Variegated-leaved)—4-5 ft. Highly decorative because of its white striped green leaves and red bark. An outstanding shrub wherever used.

EUONYMOUS ALATUS (Winged Burning Bush or Spindlewood)—5-6 ft. Of Japanese character. Has winglike bark. Brilliant scarlet foliage and red berries in fall. A truly beautiful shrub.

EUONYMUS (Common Burning Bush)—6-7 ft. Tall, erect shrub for border or evergreen planting. Produces great masses of orange-scarlet berries. Very effective for fall color.

JUNEBERRY—6-7 ft. An early flowering shrub producing white flowers in May followed by red berries which turn a deep purple. Edible.

FRENCH LILACS—6-8 ft. The bush is a little smaller than the common lilac, but there is no comparison in the flowers. The flower stalks of the hybrids are many times as large as the common lilac. It is not uncommon to see flower spikes 15 inches long. The French lilacs are particularly desirable for garden planting where their beautiful trusses contrast splendidly with spring flowers planted beneath.

Snowflake Mock Orange

(U. S. Plant Patent No. 538)

This is the biggest improvement in Mock Oranges in many years. This new Double Mock Orange is truly outstanding. It is all double; every blossom intensely double. Exceptionally sweet scented, glistening white, large flowering, profuse bloomer, symmetrically formed and gracefully branched, neat, beautiful foliage,

rugged, fast growing, and exceptionally hardy. It will grow to a height of 10 to 12 feet as a large specimen shrub, or if desired can be easily kept within bounds with a little pruning. A truly remarkable shrub. Plant Patent prohibits propagation of Snowflake by anyone except Patent owners and those licensed by them.

SPIREA ANTHONY WATERER—2-3 ft. A very popular low growing bush, constantly in bloom all summer. Flower clusters large, flat topped and of deep rose color. The leaves are frequently variegated yellow and red.

SNOWBERRY (Waxberry)—3-4 ft. A rather low growing shrub with small pink flowers followed by large clusters of white berries which hang on until winter. Has an attractive bright foliage throughout the season.

TAMARIX (Salt Cedar)—6-7 ft. Will grow on any soil and under any conditions. Has feathery, silvery-gray green foliage, with long pinnacles of deep pink flowers. A distinctive type of shrub.

WAYFARING TREE—5-6 ft. A gray-barked, gray foliage shrub, turning to a beautiful crimson in the fall. Produces large clusters of red berries, turning to black.

February and March Shrub Pruning Service

The "secret of perpetual youth" in shrubs is correct pruning. All shrubs need some attention if they are to be kept looking their best—some requiring frequent attention, while some "get by" fairly well with considerable neglect.

It is safe to say that any shrub planting that has been in three years or more will be greatly improved in beauty and usefulness by judicious thinning and shaping.

We have efficient, well-trained men available for this work during February and March.

It will be a pleasure to consult with you on the attention your plants need. A modest expenditure at this time will add much to their beauty and life span.

This is also the ideal time for pruning fruit trees. Pruning is a "must" for them just as spraying is.

Why not drop us a card or call Long Lake 174 for an appointment?

DANIELS GAY, GREEN HARDY VINES

Pleasing Climbers That Screen, Cover and Beautify

Nothing provides a homelike and restful appearance more quickly than a covering of green vines for blank walls, bare fences and arbors. We are particularly fortunate in being able to offer the finest specimen vines we have had for many seasons.

BITTERSWEET—"A spray of bittersweet is a lasting thing. Pulled from the fence in pine-sweet woods—First fall the leaves; next splits orange calyx fair—revealing the crimson heart; and so throughout dull wintertime it stays, a bold bright memory of Autumn days." Always plant three or more vines to be sure of an abundant production of berries.

CLEMATIS HENRYI—A profuse bearer of enormous white flowers. Similar to Jackmani in manner of growth.

CLEMATIS JACKMANI—The most popular of the large flowering clematis hybrids. A strong grower and produces a mass of intense violet-purple flowers four to six inches in diameter, from July until October.

CLEMATIS PANICULATA (Sweet Japan Clematis)—Flowers small, star shaped and creamy white. A luxuriant grower, profuse bloomer and possessing fine foliage. Very fragrant.

GRAPE—BETA and ALPHA—Hardy as wild grape. Heavy fruiters. An unexcelled cover for arbors.

HONEYSUCKLE SCARLET TRUMPET—This splendid variety with its interesting twining method of growth is generally considered the finest of the honeysuckle vines. Brilliant yellow throated scarlet flowers. Long blooming period.

IVY—BOSTON—Clings to rough surfaces. Small leaves; refined grower; brilliant fall color. The best "wall-clinging" vine.

IVY-ENGELMANNI—The best hardy vine for brick, concrete or stucco surface. Much smaller foliage and thicker than the common variety of Creeper. Red fall foliage.

IVY—VIRGINIA CREEPER—(American Woodbine)—Entirely hardy. A quick strong grower. Brilliant red fall foliage.

MATRIMONY VINE—Fine bank and ground cover and soil retainer. Large masses of purple flowers succeeded by bright scarlet berries.

MORDEN MATRIMONY VINE—A refined improvement of the ordinary Matrimony Vine. Less coarse and more upright in manner of growth—definitely more desirable.

DANNY SAYS:

When it comes to hedging, hedge — don't hedge. Proper hedging gives a fence and your neighbors no offense. If you must draw the line somewhere, draw it with a hedge. They beautify as they serve.

HEDGING SHRUBS

Living, Lasting Fences

The proper use of hedges adds immeasurably to the attractiveness of one's home grounds. They will effectively mark a boundary line, serve as a screen, or furnish a pleasing background for an informal planting.

In this group we offer fine, strong plants, suitable for starting live fences. These are well grown, strong rooted hedging size specimens which will give quick results.

DANIELS SCIENTIFIC WEED CONTROL

THROUGH THE APPLICATION OF HORMONES AND CHEMICALS

Dandelions, Plantain, Chick Weed and some other heretofore almost "hopeless" lawn pests can now be quickly eliminated at moderate costs by skilled Daniels applicators using new hormone compounds.

Poison Ivy—that arch enemy of out-door fun on so many properties, can also be destroyed quickly and with certainty in the same manner.

We pride ourselves on keeping abreast of the times in all new and improved advances in Horticultural technique, as these services (used by us first in 1944) will attest.

It seems probable that soon satisfactory controls for mosquitoes on home properties will be available. Rest assured that as soon as such controls are safely available that Daniels will offer you such services.

It will be a pleasure to discuss our Weed Eradication Services with you at your convenience and to arrange for the work to be done at the proper time this summer.

DANIELS BEAUTIFUL ROSES

The Queen of All Flowers

The rose still is No. 1 in the "Hit Parade" of colorful and effective plants. Its fragrant blooms with varying forms and color are unsurpassed by other plants. Its desirability both as a cut flower and for garden and landscape effect makes it "tops" among dual-purpose plants.

Add 5% if roses are to go by mail.

ROSES EASY TO GROW

There is no mystery about the culture of roses. If their few simple needs are tended to they may be grown as readily as our other common shrubs. The hardy Rugosa Hybrids, for instance, require no more care than a Hydrangea. Nevertheless, they will respond more generously to understanding care in the way of cultivation, fertilization and pruning than do most shrubs.

The same is true of the less hardy varieties that we list except that they, in most locations, require some form of simple winter protection.

Three Year Potted Roses

(Not Mailable)

We offer this year a select list of three year old Potted Roses. Last spring we potted up a fine assortment of two year Roses. We grew these in out-door frames all last summer and now have them—still undisturbed in their pots—in our storage cellar.

They are all ready to "pop" the first thing in the spring, and will give exceptionally quick and strong growth when planted out.

For extra fine first year results we strongly recommend these fine three year old potted plants.

DANNY SAYS:

Perhaps the Eskimo doesn't really grow our "Eskimo" roses, but they are so very hardy all through the North that it seems as if they could grow them away up there.

DANIELS SHADE TREES

No outdoor living room is complete without the cool shade of properly placed trees. Then too, they furnish a suitable framing for both close and distant views in the landscape and when used for screening effects add a comfortable feeling of privacy.

As shade trees take a much longer time to reach their most useful size than do most other plants, we suggest planting without delay. A year lost now can never be regained. **DO IT NOW!**

And because of their relatively slow development, only the best transplanted and carefully trained trees should be planted. Daniels hardy, northern grown trees have well developed root systems which insure you quick and certain growth.

Twelve Outstanding Shade Trees

ASH, AMERICAN WHITE—A tall growing native tree. Straight, clean growth, round head and dense foliage. In autumn the foliage coloring is unusually beautiful.

BIRCH, WHITE—A beautiful, graceful, upright growing tree famed for its attractive bark. A favorite for lawn tree planting. Effective when planted singly or in groups. If planted three or four in one clump one will get the natural effect of native growing trees.

BIRCH, CUTLEAF WEEPING—One of the most admired of all lawn trees. Distinguished for its unusual grace in character and outline. Its white bark, long drooping branches and finely cut foliage give a particularly artistic touch to the landscape.

CRAB APPLE, HOPA—A very attractive ornamental tree with large red blossoms in the spring followed by red fruits. Leaves color beautifully in the fall.

CRAB, RED SILVER—A valuable new addition to the small ornamental trees of the Northwest. Early spring flowers are deeper and more brilliant in hue than Hopa, but not quite as large. Foliage has a distinctly reddish color, overcast with silvery pubescence.

ELM, AMERICAN—The most popular tree for shade, street and lawn plantings. A rapid grower and long lived.

SOFT or SILVER MAPLE—A hardy, quick growing shade tree which is of special value where immediate shade is wanted. Vigorous, healthy and attractive.

HARD MAPLE

HARD MAPLE (Sugar Maple)—One of the most desired shade and ornamental trees. A symmetrical tree of great beauty. Deeply lobed, dark green leaves taking on beautiful vivid tints in the fall.

MOUNTAIN ASH—One of the most popular of the small lawn trees. White flowers in spring followed by large clusters of orange red berries which remain throughout the winter. Finely divided foliage.

NEWPORT PLUM—The best all summer red foliage tree for the North. The typical plum blossoms of early spring are backed by the crimson of the newly unfolding leaves. A small to medium sized tree of striking color.

BOLLEANA POPLAR—Probably the most desirable of all the slender, upright growing trees. Its spirelike, columnar form and glossy green leaves with downy white undersides have made it exceedingly popular where a strong vertical accent is desired in the landscape.

NIOBE WEEPING WILLOW—The best of the weeping willows. A clean type of tree, free from litter of broken branches and other trash so common in some willows. Its form is that of a graceful weeping tree and this, with its beautiful golden bark, makes it exceedingly attractive in both summer and winter. A very rapid grower.

DANNY SAYS:

A beautiful shade tree is a thing of beauty and a joy forever. According to Joyce Killmer's beautiful poem, "Only God can make a tree," but we're doing all we can to aid the good work with hundreds of beautiful specimens of all varieties ready for your selection.

DANIELS TREE PROTECTIVE SERVICE

A good tree is one of the most valuable assets a piece of property can possess. It is a part of one's domain, so treasured, so truly valuable that its well being must be conscientiously guarded. If you list among your treasures one or more fine trees you will be interested in DANIELS TREE PROTECTIVE SERVICE—the best and safest form of "insurance" you can write for them.

We can serve you efficiently and economically whether it be a matter of LIGHT TRIMMING, HEAVY PRUNING, BRACING, FEEDING, SPRAYING, TREE SURGERY, OR OTHER TREE WORK.

We will be glad to consult with you regarding the welfare and preservation of your valuable specimens and to suggest the care necessary for their continued health and long life.

REFORESTATION AND WOOD LOT REPLACEMENTS

Every year we find a certain percentage of the shade trees we are growing fail to measure up to our high standard for specimen lawn trees. Because of slight crookedness, lack of branch balance or some other imperfection they are graded as "SECONDS." As far as vigor and ability to grow and make a good tree is concerned these are as good as any. However, because of these small imperfections we offer these at ridiculously low prices—less than half the usual price. These are ideal trees for screens, woodlots and for establishing a replacement program in groves which are "thinning out." May we quote you on these, or better yet show them to you in our nursery?

DANNY SAYS:

In pest control "let us spray" is our motto. We are splendidly equipped with high pressure power sprayers to furnish adequate fruit and shade tree protection in the Minnetonka district. Let us talk your needs over with you early so that you can avoid the damage to trees and inconvenience to yourself from such cantankerous cankerworm infestations as we have had the past few years.

Daniels Beautiful Evergreens

No planting is truly complete without some evergreens.

During the winter they form a most attractive part of one's planting, and during the summer their splendid colors and varying forms add a note of interest to even the most elaborate landscape effect.

As specimen trees in front of the home they are perhaps second to none in popularity. Their importance in foundation plantings has increased so rapidly in the last few years that now a foundation planting seems incomplete without them. No other plants can so effectively and completely provide a windbreak or screen for they are there to serve you throughout the winter and summer. Whether in the foundation planting, border planting, screen or windbreak, evergreens give what no other trees can—twelve months of complete service and beauty.

PFITZER JUNIPER

THE TWELVE MOST POPULAR EVERGREENS

PYRAMIDAL ARBORVITAE—A solid pyramid of green, compact branches which retains its shape without shearing. The best of the narrow, upright, evergreens for foundation and accent plantings. Bright green winter and summer.

SIBERIAN ARBORVITAE—A compact, dense, bushy evergreen, conical in outline. Dark rich green. The hardiest of the Arborvitae and the "best" medium height evergreen.

PFITZER JUNIPER—A graceful, broad, low evergreen with sweeping fronds of silvery green foliage. The best low evergreen for city conditions, dry locations, and also does well in shady places.

SAVINS JUNIPER—The "one best" low evergreen of spreading habit. Rich deep green, medium low and moderately compact. Endures trying locations.

SILVER CEDAR—Probably the most popular are the grafted silver cedars. The brilliant silvery green of summer becomes only slightly duller in winter. Not to be confused with the common, less hardy, less colorful seedling Silver Cedars.

AUSTRIAN PINE—A beautiful, symmetrical, deep green, large growing pine. One of the best. Excellent for city conditions and valuable for screen plantings.

MUGHO PINE—An excellent low, compact pine. Always a bright, fresh green. May be kept a low "pin cushion" type or allowed to grow taller and more spreading. Exceptionally hardy.

SCOTCH PINE—An excellent tree for screen and mass plantings. Has shorter needles and is somewhat open in growth unless sheared. Hardy and fast growing.

BLACK HILLS SPRUCE—The hardiest of all spruces. A symmetrical, compact and bushy grower. A beautiful tree, with colors varying from a deep to silvery green.

COLORADO BLUE SPRUCE—Its brilliant blue-green color, neat compact form and symmetrical habit of growth, makes it invaluable in landscape work. The glory of the Blue Spruce is in its intense steel-blue foliage.

COLORADO GREEN SPRUCE—A very fine tree, similar to the Colorado blue in all respects except color, which is a deep green without the former's silvery sheen. One of our finest lawn specimens.

YEW (Taxus)—The finest group of evergreens for shady spots. Will stand more shade than any other evergreen. Deep, dark green in color, refined in appearance and form, the Yews are truly unsurpassed in beauty. Endure city conditions well, but are not advised for exposed locations.

DANNY SAYS:

Why not a living Christmas tree? Not only is the evergreen's delightful form and beauty most appropriate at Santa time, but its year 'round beauty is valuable at every season.

Daniels HARDY PERENNIALS

We wish you could see our perennial gardens. Here are the plants with which to paint your Spring, Summer and Autumn flower pictures. They add the variety to your landscape picture that makes it interesting at all seasons. Perennials are unquestionably the "finishing touches" to the planting whether it be an informal border or a formally laid out garden. With their unlimited assortment of bloom, size and color they may be worked into all parts of the border where their brilliant hues add to the planting a pleasing zest without which it would be incomplete.

Our plants are extremely strong—field grown stock, produced on specially prepared soils abounding in humus and plant food. Under these conditions we have developed exceptionally fibrous roots and strong crowns and tops—plants far surpassing in strength and vitality those ordinarily offered for sale. Daniels' Perennial Plants are preferred by all who have seen or used them.

Our list of varieties is very long and complete—much too long for printing here. Of the several hundred we are growing, we list below some of those most generally popular. Send for our 8 page Perennial circular.

Prices are 35c each, or \$3.50 per dozen (postpaid) except as noted below:

GARDEN CHRYSANTHEMUMS

New Northern Bloomers DeLuxe. One of the finest additions to our flower gardens in many years.

We offer here twenty of what are generally considered the finest of these gorgeous creations. They are wonderful. They will bring new garden joys to every plant lover who tries them. Plant them freely—but order early to avoid disappointments.

ALGONQUIN—Early yellow
 BUTTERBALL—Compact yellow
 BRONZE CUSHION—Best bronze
 BOREAS—White
 CHIPPEWA—Purple
 DAHLIA MUM—Purplish-wine
 EUGENE WANDER—Golden
 yellow
 HARMONY—Bronze to yellow-
 rose
 MOON GLOW—Bright yellow
 PURPLE STAR—Purple

PINK CUSHION—Best pink
 POHATCING—Pink
 PIPESTONE—Bronze cushion
 type
 RED GOLD—Red and orange gold
 RED HAWK—Dwarf red
 SNOWBALL—White
 SONNY BOY—Button yellow
 SUNRED—Brazil red
 WELCOME—Purple mallow
 YELLOW CUSHION—Best yellow

Choice Potted Plants 50c each. Field Clumps 75c each.
 SPECIAL—Any 12 of the above (potted) only \$5.00 postpaid.

DELPHINIUM HYBRIDS

"GORGEOUSNESS PERSONIFIED"
"GORGEOUSNESS PERSONIFIED"

In addition to the regular Delphinium types and assorted hybrids, we offer five especially valuable and superior types—the finest and best of the **Pacific Giant Hybrids**.

The **Pacific Giant Strains** are commonly described as the "World's Best." The flowers are immense in size, tightly set on tall, strong stems, and have proven 60 to 65% mildew resistant. No garden is complete without a generous scattering of these truly superior varieties.

These choice varieties are only 60c each.

PACIFIC HYBRID STRAINS

Black Knight Series—The darkest of all—deep midnight violet. Heavy velvety texture.

Galahad Series—Enormous, clear white flowers, frequently 3 inches in diameter, with a glistening texture.

Guinevere—Light pink lavender self with white bee.

King Arthur—Brilliant royal violet with large white bee.

Summer Skies—Clear light blue with white bee.

SPECIAL OFFER: 1 each of the above 5 varieties. (A \$3.00 value) Postpaid, for only.....\$2.50

IRIS

35c Each

DEPUTE NOMBLAY—Lavender and dark purple

ETHELWYN DUBAR—Fragrant orchid pink

EUPHONY—Copper with violet

JEAN SIRET—Yellow everblooming

LT. WILLIAMSON—Violet with royal purple

MADAM CHEREAU—White with blue edges

MRS. VALRIE WEST—Crimson brown

NENE—Reddish purple

PALLIDA DALMONICA—Lavender blue

PLUE DeOR—Tall yellow

ROSE PETAL—Rose pink

RUBEAU—Red brown with purple

SIERRA BLUE—Clear medium blue

SUNTAN—Bronze

SUSAN BLISS—Orchid pink

ZUA—Pearl gray

PEONY

75c each except as noted

BARONESS SCHROEDER—White

COURONNE D'OR—White

DR. BRETTENEAU—Pink

EDULIS SUPERBA—Deep pink

EUGENE BIGOT—Red \$1.00 each

FELIX CROUSSE—Deep rose red \$1.00 each

FESTIVA MAXIMA—White

KARL ROSENFELD—Dark red \$1.00 each

LA TULIP—White

MME. DeVERNEVILLE—White

MARIE LEMOINE—White

MARTHA BULLOCK—Rose pink \$1.00 each

OFFICINALIS RUBRA—Crimson \$1.25 each

REINE HORTENSE—Apple blossom pink

VICTOR HUGO—Light red

UNNAMED, MIXED COLORS—3 for \$1.00

TWENTY EXTRA CHOICE PHLOX

50c Each Except As Noted

AFRICA—Brilliant carmine-red with blood-red eye. Well formed heads with large florets. 60c.

B. COMPTE—A rich, satiny amaranth. Large heads produced on tall stalks.

BEACON—Brilliant cherry-red.

CHAMPS ELYSEE—Compact heads of rich purple.

CHAS. CURTIS—An unusual and distinctive color, sometimes described as Sunset Red. Fine, strong grower 2½' to 3' tall. Large flower head. 60c.

DAILY SKETCH—Large trusses of lustrous pink with crimson rose eye. Florets exceptionally large—up to 1½" across. 3-3½' tall. 60c.

ECLAIEUR—Brilliant rose magenta, with white eye.

FUERBRAND—Clear, rich, brilliant orange scarlet, against vermillion.

GRAFF ZEPPELIN—Ivory white flowers with vermillion-red eyes. Holds color well without fading.

HAUPTMAN KOEHL—Glowing, full toned red. Large, compact trusses on strong stem. One of today's finest red phlox. 24" in height. 60c.

JULES SANDEAU—Brilliant watermelon pink. Rather dwarf. Free bloomer with a long season.

LEO SCHELAGETER—Scarlet-carmine with orange cast. One of the best reds. 3 ft. 60c.

MARY LOUISE—Considered by many to be the best white phlox. Pure white with large heads. Individual florets often 2" across. Fragrant.

MRS. JENKINS—A splendid old white flowering Phlox, free blooming with good sized flower clusters.

PAINTED LADY—Silvery pink with salmon shadings and cherry red eye. Strong grower and free bloomer.

PROGRESS—Superb light blue, handsomely set off with deeper purple blue eyes. Extra large trusses with florets from 1½ to 2" across. 2½'. 60c.

RHINELANDER—Salmon pink with carmine eye. One of the best "Old Faithfuls."

R. P. STRUTHERS—Another ever popular older variety. Rich salmon-pink with scarlet eye.

STARLIGHT—Rich violet with an almost perfectly formed white star in the center. A strong grower.

We will be glad to mail to anyone interested our 4 page Perennial Circular—with a complete "Height, Color and Season of Bloom" chart of 100 of the Northwest's most popular and dependable Perennials.

"On One" -- The Most Practical Horticultural Handbook for the Northwest! See Page 32

THE HOME GARDENER SAYS:—

"The best Book of its kind ever put on the market."—Says "Number One," Minnesota.

"It is the best book on Horticulture for the Northwest that we have read."—Says "Number Two," Wisconsin.

"Just brim full of knowledge, and most useful and interesting."—Says "Number Three," New York.

"I have found it interesting and useful. Enclosed is \$1.00 for another copy."—Says "Number Four," Minnesota.

"Appreciate the book greatly. It is unique and just about 'it' in its field."—Says "Number Five," Sask., Canada.

"After reading the first few paragraphs of 'Live At Home and Like It,' you have had your money's worth even if the book stopped there."—Says "Number Six," Minnesota.

"We enjoyed this book very much and use it constantly as a hand-book of information on practically everything we want to know about things that grow."—Says "Number Seven," Iowa.

See Free Book Offer, Page 32

"There are many things I like about the book, notably the very clear illustrations and the chart on perennials, etc."—Says "Number Eight," Minnesota.

"I was more than pleased with the contents of this book. It is a valuable reference guide for the amateur gardener because it gives detailed information on the things I wanted to know about shrubs, trees, vegetables, and flowers."—Says "Number Nine," Wisconsin.

"So simple and scientifically correct—so well and cleverly illustrated."—Says "Number Ten," Alabama.

"I am a beginner and have lots of books, but yours certainly has a place in the Northwest. You stress varieties that will grow up here which to us is of the utmost value."—Says "Number Eleven," Minnesota.

ANNOUNCING

A NEW, PRACTICAL, HELPFUL BOOK

FOR THE HOME GARDENER

"LIVE AT HOME . . . AND LIKE IT!"

By FRANCIS DANIELS

- The first of its kind and just for the Northwest.
- 120 Pages "cram-packed" full of the answers to the questions every Home Gardener asks himself 100 times a month.
- Just the book Mr. Average Homeowner has longed for. In simple, understandable language it tells the "When, Why and How" of practical gardening.
- Pocket size—5½ by 7½ inches—convenient to handle and easy to read.
- It is of equal value to the small home dweller, the owner of an estate and the commercial grower.
- Written by a man who has spent 37 years in practical horticultural work—teaching, "preaching," but most important, practicing everything he has written.
- Written for the Northwest and our exacting conditions, which can be said of no other book that contains all this material. Most books, and most magazines are written for the entire United States of America and of necessity contain much material that is irrelevant and confusing for us here in the Northwest.
- What would you give for the privilege of sitting down with a real gardening expert—one who knows not only the technical angles but who has had a lifetime of practical experience in fruit, vegetable and landscape work—and asking him the answers to your many perplexing garden problems? "LIVE AT HOME AND LIKE IT" offers you this opportunity.

WHY THIS BOOK?

It is everyone's duty to garden now, both for food and beauty. Any little corner or larger area of one's home grounds that can be, should be converted to food production. Health, relaxation and exercise may be found in one's yard and are important home-front responsibilities. Beautiful home grounds and their enjoyment are morale builders.

Help is scarce. More and more everyone must take care of their own grounds and gardens. This book is designed to aid you in doing just that in an easier, more intelligent and efficient manner.

WHAT IT CAN DO FOR YOU

It is a complete, up to the minute "Short Course" in Horticulture and Gardening. It tells WHY as well as HOW and WHEN.

Each chapter is short, easy to read, pithy and covers one subject completely. Ideal to pick up with just time for a chapter or two . . . interesting to read from cover to cover at one "sitting" . . . and handy to look up the answers to perplexing garden problems. Generously illustrated.

PRICE ONLY \$1.00 POSTPAID

SEE FREE BOOK OFFER ON PAGE 32

EXPERTS WHO KNOW SAY:—

"An excellent contribution in an area where specific, helpful information is needed."—Says Professor No. One, Agricultural Education, University of Minnesota.

"I have read the book from cover to cover three times and thoroughly enjoy it as a practical reference on the entire field of Horticulture as it especially relates to this area."—Says County Agent, Minnesota.

"A good job, surprisingly comprehensive for the size of the book."—Says Professor No. Two, Horticulture, University of Minnesota.

"I can think of few questions relating to home grounds, its planting, and care, which you have not answered."—Says Professor No. Three, Horticulture, University of Minnesota.

"The book is very comprehensive. The special needs of this region are particularly stressed, also, in cultural directions and in pest control methods."—Says Professor No. Four, Horticulture, University of Minnesota.

"There is certainly a fine lot of information in it, and I hope Mr. John Q. Public duly appreciates it."—Says Professor No. Five, Horticulture, University of Minnesota.

"YE EDITOR" SAYS:—

"The book contains so much information that it may well be considered a reference book, and yet it is readable and entertaining without."—Says Editor A. N. Wilcox in the "Minnesota Horticulturist."

"I am impressed with the accuracy of the information under Northern conditions. I really think you have something worth while for gardeners in the Northern states, especially Minnesota and Wisconsin."—Says Editor H. J. Rahmlow, of "Wisconsin Horticulture."

"Not only does it answer the questions of Home gardeners with information directly pertinent to their conditions, but it should help the Nurserymen in that area through encouraging their customers to better success with the plants they purchase."—Says Editor F. R. Kilner, in the "American Nurseryman."

DANNY SAYS:

For 32 years the author has been growing from 20 to 150 acres of commercial fruit, vegetable and nursery crops. He should and does "know the answers."

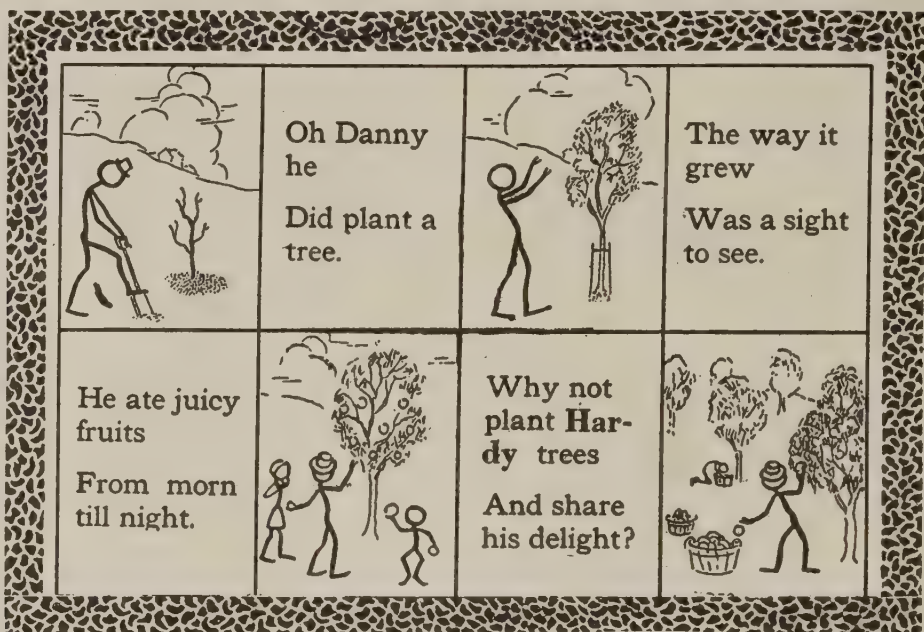

DANNY SAYS:

For 23 winters the author lectured on Horticultural subjects at the University of Minnesota Farm School and for 32 years he has been dealing with and answering the questions of Mr. and Mrs. Home Gardener. He should, and does "know the answers."

Part II

Daniels
Choice
Fruiting
Plants

A New Day Has Dawned—

for the fruit grower. Scarcity of fruit and development of new and improved varieties have brought a new era for the fruit grower.

The home owner—hard pressed by scarcity of fruit and prohibitive prices—must turn to home production if he would have bountiful supplies. The commercial grower can be assured of strong demand and profitable prices for some time to come.

And to all planters the advent of new and thrilling varieties (mostly creations of our great State Fruit Breeding Farm) unfolds a field of fruit growing achievement and profits scarcely dreamed of a few years ago. Size, quality, productivity, hardiness, marketability—all these joys and more, too, await the planters of the fine varieties we list in the following pages.

It is an accepted fact that fruit acreages are low—supplies of many kinds scarce and decreasing (because of labor shortage and national use) and that demand is great and prices high. This situation will probably exist for some time to come.

The grower who plants now—spring, 1946—should be in a very favorable position, whether for home use or market, for several years.

There is also a great shortage of fruit plants (due to nursery labor problems). It is commonly predicted that there will not be enough of many kinds of fruit plants to meet the demand this year. Many nurseries are already canceling items in their catalogs.

It is not a cry of "Wolf, Wolf," when we advise early ordering.

Buy early—but buy the best—Buy Daniels Hardy northern grown plants of the best varieties for the North.

DANNY SAYS:

Want to get started early? Are you in a hurry? Then consider these facts:

- Haralson, Daniels Red Duchess, Erickson,, and Dolgo bear very young . . . frequently in our nursery rows.
- The Bearing age plums and cherries should start producing next year.
- "Can't Waiters," . . . that super-deluxe, transplanted, extra large tree is ready to work for you "right quick."
- Everbearing Strawberries bear a fine crop starting in 90 days or so from the time you plant them this spring.
- June-bearing Strawberries give a full crop the year after planting.
- Raspberries give a partial crop next year, too. Our Extra Large, top size (often called 2 year) plants will bear twice as much next year as the smaller grades.
- Our big 3 year Currants and Gooseberries have already borne for us, and will be "Johnny on the spot" in a hurry for you.
- A strong rhubarb root will give you considerable sauce next year, too.

DANIELS HARDY APPLES

There are probably several hundred different kinds of apples being grown in Minnesota and adjacent territory—but only a few of them are really worth while. Out of all of these we recommend the following:

THE 10 BEST APPLES FOR MINNESOTA

- | | |
|-------------|-------------|
| BEACON | McINTOSH |
| DANIELS | MINJON |
| RED DUCHESS | NORTHWEST |
| ERICKSON | GREENING |
| FIRESIDE | PRAIRIE SPY |
| HARALSON | WEALTHY |

These Select Ten offer everything anyone can desire in apples for our trying northern conditions. They provide an entire season of fresh fruit, starting to ripen in late July (in central Minnesota) and continuing until in October—with fine, highest quality dessert apples as well as the best of all pie and baking sorts that will keep all winter. Some of these are the old “dependables” that have long led in popularity and some are new creations of our great Minnesota State Fruit Breeding Farm—varieties that are completely revolutionizing apple growing in Minnesota. They offer unexcelled quality, hardiness, productivity and keeping ability—a full season of the finest in apples that can safely and successfully be grown here.

Now—right in our own yards and home and commercial orchards—we can grow as fine apples as are produced anywhere in the world.

Plant—and plant now—the marvelous new sorts . . . and remember, too, that the older Duchess, McIntosh, Wealthy, and others listed here are just as good as ever . . . and each has its important place.

PRICES ON APPLES ON PAGES 20 AND 21 (Not over 25 of one kind to a customer)

Only standard size is available. Add 10% if to go by mail.

Extra Large—5 to 7 feet.....	1.50	7.25	13.90	33.50	2.00	9.75

FIRESIDE

(Minn. No. 993)

The New “Northern Delicious”

The latest, and many say the best, of the all-winter apples yet introduced by the great Minnesota Fruit Breeding Farm. Extremely hardy for a tree producing such high quality fruits, Fireside has proven dependable in all but the extreme Northern part of Minnesota. The tree is vigorous, highly productive, and a regular annual producer of large crops. The fruit is large, colored a beautiful red, clings well to the tree, and keeps all winter.

In flavor the fruit is described by the originators as rich, sub-acid, almost sweet, with a crisp, firm juicy flesh. Most orchardists put it at the head of all hardy winter apples for quality—the equal or superior of Delicious. But remember it is HARDY, and can be grown successfully in home or commercial orchards in practically all parts of Minnesota.

MINJON

(Minn. No. 700)

The “Minnesota Jonathan”

The reddest, all-red, red apple of Wealthy season. Though test has proven its worth for both home and extensive commercial growing.

It is hardy throughout all of Minnesota. It is a regular bearer. . . . Its even distribution insures uniform size. . . . It clings to the tree until picked. . . . It comes in Wealthy season but colors much better. . . . It has an excellent flavor and quality. . . . It tops the market in its season.

What more can you ask in a fall Apple?

As the name implies it is so closely similar to the Jonathan that it is commonly called the “Minnesota Jonathan,” and its name, “Minjon” is so derived.

Commercial growers have found it highly profitable in late and post-Wealthy season.

VICTORY

(Minn. No. 396)

The New “Minnesota McIntosh”

A new Minnesota creation of good size and high quality similar, but superior to the old McIntosh.

Victory not only possesses the famed aromatic flavor of the McIntosh, but surpasses it in these respects—Better Color, Firmer Flesh, Higher Quality, Superior Cooker, A Week Later, Keeps Month Longer, Sticks to Tree, Handles Better.

Truly Victory is one of Minnesota’s finest apples. It is unsurpassed for the home orchard and a top money maker for the commercial grower.

For “Quality Supreme” plant Victory.

MINNESOTA NO. 638

The New “Winter Wealthy”

No. 638 is rather similar to Wealthy in appearance—but so, so much better in most respects that it is in a class by itself. A beautiful red in color, a regular fruiter (hasn’t missed a crop in over twenty years), uniform in size, excellent in quality, clings to the tree through harvest—because of these and many other good points, commercial growers commonly acclaim No. 638 to be one of the very best of our new varieties. Probably will be named very soon. Season late—usually harvested in mid October.

MINNESOTA NO. 790

The Northwest’s Best Baking Apple

A big, new apple with a rich, solid red color. A regular bearer of good quality that has been proven by exhaustive tests to be the best baking apple we can grow in Minnesota. Far superior to our older varieties in this respect. It is equal in baking qualities to the famed Rome Beauty—heretofore the acknowledged “King of the Bakers.” Valuable both for the home and commercial planter. Will undoubtedly be named soon by the University Horticultural Experts.

BEACON

(Minnesota No. 423)

**An Early All-Red Eating Apple That Tops
The Early Fall Market**

This variety has rapidly pushed ahead until it has now established itself as the leader among all early fall varieties for the middle west. Note these points of superiority:

TREES—Vigorous, productive, hardy.

SEASON—Late Duchess. Keeps one month after picking, without cold storage.

FRUIT—Highly colored, all red. Better eating quality than Duchess and an excellent cooking apple.

We have a considerable number of Beacon in our own orchards—several trees 18 to 20 years old. We are completely "sold" on them and are planting heavily. They are dependable bearers—one can take plenty of time in marketing, as they keep well, and they top the market.

DANIELS RED DUCHESS

Still the Best Early Apple

A remarkable early red apple. An improved "bud sport" of the Duchess of Oldenburg.

The Daniels Red Duchess is an early red apple that seems destined to entirely displace the old Duchess of Oldenburg. It possesses all of the good qualities of the older variety and in addition that all important, price commanding quality of high red color. It comes when red apples are scarce—and always sells at top market prices.

We know of no better real early "summer" apple for general commercial or home growing in this section of the country.

ERICKSON

The Biggest Red Apple

The largest early red apple, and possibly the largest red apple now highly recommended for planting. Bears at a very early age. Because of its extra large size it is always in strong demand on the early market. Extremely hardy, and a regular producer. Good quality. If you're looking for size—you'll find it in Erickson—and you'll find early market high profits, too!

HARALSON

(Minnesota No. 90)

**The Most Widely Planted
Hardy, Red, Winter Apple**

Haralson has really "arrived." Because it was one of the earlier Minnesota introductions, and because it has proven itself so valuable it is now one of our most extensively planted varieties.

Here are some of Haralson's outstanding good points: Very hardy . . . extremely productive . . . bears, and heavily, at a very young age . . . red . . . good size . . . sticks to the tree until picked . . . good in quality for dessert purposes, and an excellent cooker. No wonder it is popular! No wonder the home gardener enthuses over it, and no wonder the commercial grower finds it highly profitable and plants more and more of it. You'll like it, too!

McINTOSH

Quality Supreme

One of the finest apples grown. Because of its brilliant deep red color, delicate flavor, crisp snow-white flesh, and distinctly pleasant aroma, it is considered by many to be the finest dessert apple of its season. McIntosh has proven eminently successful throughout the Southern part of the state and is at present one of the Northwest's most popular varieties. Season October to January.

NORTHWEST GREENING

The One Best Winter Greening

The best and longest keeping of the greenings. A splendidly formed, bright green fruit. Should be in every orchard for, even in ordinary storage, they keep well all winter and in a good vegetable cellar sometimes on into the summer. One of the leading and most profitable commercial varieties in the Southern part of Minnesota. Unexcelled for pies and baking.

PRAIRIE SPY

(Minnesota No. 1007)

Hardy, Red, High Quality Winter Apple
Here is another outstanding origination of the Minnesota State Fruit Breeding Farm. As the name indicates, Prairie Spy, has many of the fine characteristics of that famous old apple of the East, The Northern Spy. It has aptly been described as "A large red apple with quality equal to any late winter variety regardless of where grown."

High points of Prairie Spy's claims to fame are:

The fruit is large, attractive red, exceptionally high quality, long keeper, clings to the tree until picked. A true winter apple.

The tree is vigorous, productive and hardy, except in highly unfavorable locations. In northern areas where growing season is very short the tree holds up but fruit colors poorly. Does excellently as far north as the Twin Cities.

WEALTHY

Minnesota's Most Famous Apple

The old favorite fall apple of corn and pumpkin time! Probably no eating apple is more popular and more loved than Wealthy, and certainly no fruit raises more nostalgic memories in those who have left Minnesota. And no wonder, for Wealthy's appetizing red appearance, its crisp, white, juicy flesh and sprightly flavor have endeared it to many.

In spite of all the fine new varieties—Wealthy retains its popularity and will be largely planted for years to come!

DANNY SAYS:

If "an apple a day keeps the Doctor away" . . . then plant some Daniels apple trees and grow your own "Doctor chasers." They bring fun, health and profit.

THE CRAB APPLES

DOLGO CRAB

We offer what we consider the three best crabs—one each of the three crab types—**DOLGO**, as our finest jelly crab, and best as an ornamental; **WHITNEY**, as our most flavorful eating crab; and **VIRGINIA** as the best of the “old fashioned” crabs and one of the outstanding, hardiest stocks for “top working.”

DOLGO CRAB

Dolgo is generally conceded to be the most beautiful of all apple trees. It is heavily laden with large white flowers at blossom time, and later the brilliant red fruit is borne freely in beautiful rope-like clusters, among dense foliage of vivid, dark green. The fruit is oblong in shape, of rare beauty and has a very unusual lemon-like flavor. Far superior to other crabs

for jellies, producing a transparent bright red jelly of high quality. Will jell even when dead ripe. In praising Dolgo the Country Gentleman says: “This variety is the most striking in appearance of any of the newer crabs tested at the Ohio station.” When in full bloom the tree is very decorative, and again in early fall when the fruit is ripening the high red color of the fruit makes this tree worth while just for ornamental purposes. The quality of the fruit for jelly and preserves is excellent. The most attractive apple tree for lawn specimens.

VIRGINIA CRAB

One of the oldest and most dependable crabs. Tree large, vigorous and heavy bearer. Very hardy. Unsurpassed as a stock for top-working to less hardy varieties.

WHITNEY CRAB

A large crab, generally considered the nicest eating of all crabs—and by many the best eating apple of its season—early fall. Large in size for a crab, well colored, with crisp flesh and a delightful flavor. A hardy, strong, very upright grower.

TWO DANIELS SPECIALS

(Neither of These Specials Is Mailable)

“CAN’T WAITERS”

Apple and Plum Trees
For the Man Who Can’t Wait

So, so often people ask us for trees that will bear right away. “I must have something that will fruit right away—I’m getting old and can’t wait forever,” is what they say. SO, we’re growing for the “can’t waiter” an extra large, fine transplanted tree all ready to go to work for you—and for lack of a more “pat” title we call them our “CAN’T WAITERS.”

We have a nice block of these in Dolgo Apple, Underwood Plum, and a few others in limited numbers.

They are pretty large to ship, so we suggest delivery or pick up service.

They are priced at \$3.00, \$4.00 and \$5.00 each, depending upon size.

But better order early—they are really scarce.

‘VEST POCKET ORCHARD’

How often has the city home owner sighed for three or more varieties of apples when there was room for only one tree in his yard! To meet their needs we have developed Daniels Vest Pocket Orchard apple trees. By means of a painstaking process of grafting, we have developed trees which will bear 3, 4, 5 and even 6 different varieties on the one tree. Each variety is as perfect as if it had grown on a normal tree. We have used only the best varieties as Wealthy, Haralson, Dolgo, Daniels Red, Duchess, McIntosh and Erickson. Aside from its utilitarian value, you will get more “bang” out of one of these trees, bearing several varieties of fruit at once, than out of any other plant on your grounds. **Order Early.** 3 varieties \$3.00; 4 varieties \$4.00; 5 varieties \$5.00; 6 varieties \$6.00; 7 varieties \$7.00; 8 varieties \$8.00 ea.

APPLE CULTURE

The recommended spacing is 30 to 35 feet in the southern half of Minnesota, and 25 to 30 feet apart in the western and northern parts of the state. In home properties, where space is limited, trees may be planted much closer together. (Let your conscience be your guide.)

Trees should be cultivated when young but as they reach bearing maturity sod supplementing with mulch under the trees and fertilizer program works out very well.

Regular pruning and spraying should be given the trees each year. Ask for our FREE “Pewee Primer of Horticulture.”

DANNY SAYS:

“Gone with the Wind?” Not so for Fireside, Haralson, Northwest Greening, Victory and Prairie Spy, for they not only keep all winter but they won’t blow off the tree at picking time.

DANIELS QUALITY PLUMS

A few years ago—yes, very few—no one dreamed that fruits like these could be grown except on the Pacific coast. But now, thanks to clever plant wizards of our State Fruit Breeding Farm, these tested and proven plums are being grown successfully throughout the entire middle west, and any of us can enjoy the pleasure of stepping into our own yard or orchard to pick our fill of these luscious plums of such intriguing flavor—right off the tree—bursting full of juice, vitamins, and pep.

Through the use of a proper assortment of varieties, such as we list, it is possible to have six, seven, yes even eight weeks of fresh plums from your own orchard—plums of such large size and tantalizing quality that no one can afford not to have them in their own orchards.

Good stock is the foundation of success in growing these plums, whether in a small home planting or a large commercial orchard. Daniels trees are good trees and everything that the word implies—true to name . . . well grown . . . large tops and roots . . . carefully handled and packed . . . guaranteed to bring you satisfaction.

Plums need to be pollinated with pollen from some other plum variety if they are to produce satisfactory crops. Whenever new plum trees are set out or established trees are not fruiting satisfactorily, be sure to plant a pollinizer plum near them.

PLUM PRICES (Except on Pipestone and Red Coat)

	1	5	10		1	5
Standard—3 to 4 ft.....	\$1.50	\$7.25	\$14.00	Standard—3 to 4 ft.....	\$1.75	\$8.50
Large—4 to 6 ft.....	1.75	8.50	16.50	Large—4 to 6 ft.....	2.00	9.75
Extra large, bearing age—5 to 7 ft.....	2.00	9.75	19.00	Ex. large—5 to 7 ft.....	2.50	11.00

Only the Standard Size is Mailable. Add 10% if to go by mail.

Big as Hen's Eggs. . . Tree ripened quality right in your own yard!

PIPESTONE and RED COAT

(Not over 5 to a customer)

Minnesota's

Two New "Super" Plums

PIPESTONE—One of the most recent introductions of the State Fruit Breeding Farm—it is rated by experts as one of the best of them all. Of good, red color it is one of the largest plums, early in season, high in quality, and a very heavy producer. An excellent canner.

REDCOAT—Early. Another of the most recent University introductions. Tree is vigorous and highly productive. Fruit is medium sized, prune shaped, fully covered—a rich red, and **entirely freestone**. Promises to become one of the most popular early varieties. Should be in every plum orchard.

EMBER—Mid-season, to late. The longest keeper of them all. Skin yellowish with attractive red blush, high quality and heavy bearer. One of the best.

KAHINTA—Large; heavy bearer. A hardy, regular fruiter. One of the best South Dakota originations.

MONITOR—Late mid-season. A large, high quality regular bearer. One of the earlier of the University introductions but still one of the best. Has been bearing profitably in our orchards for 20 years.

UNDERWOOD—The earliest and one of the best of them all. Large, rich red skin and firm juicy golden flesh. Excellent quality.

WANETA—Considered the best of Professor Hansen's South Dakota introductions. Very large. Red with bluish overcast. Excellent flavor. A heavy fruiter.

POLLINIZERS (An Orchard Necessity)

Certain varieties have proven themselves excellent Pollinizers for the big Minnesota plums. Some pollinizers work better on certain varieties than others, so we suggest that the selection of a pollinizer variety be left to us. Simply specify pollinizer on your order and we will select the best variety for your assortment. But don't forget that proper pollinizers are essential to heaviest fruiting of the other plums.

DANNY SAYS:

Crazy? No just PLUM crazy—and any one who grows these luscious big Minnesota plums is crazy about plums, too.

PLUM CULTURE

Plums should be planted 20 x 25 ft. in commercial orchards, but for home gardens may be as close as 18 x 18 ft. They do best when cultivated until late summer, but in small properties may be kept in the sod mulch system throughout the year if well fertilized. Annual pruning is desirable, removing crowding and older wood, maintaining a good supply of well spaced, young, and vigorous wood. A thorough spray program is essential.

Daniels HARDY PEARS

HOME GROWN
(In your own yard)
LUSCIOUS
TREE RIPENED PEARS
ARE YOURS
FOR THE PLANTING.
AS SURE AND AS EASY
AS APPLES.

PEARS FOR THE NORTHWEST

May sound too good to be true, but it's a fact that we can now grow pears here in the North—good eating and good canning, too. We're doing it now, many others are and you can, too.

Pears are no longer an experiment in Minnesota and adjacent territory. The varieties we list have proven their suitability to this climate with many years of successful production. The new Bantam (Minn. No. 3) is the finest small pear yet developed for the North. You can now grow in your own home orchard good quality pears in sufficient quantities for any family's eating and canning needs. If you are not growing them you are missing something worth while!

Pears are as easy to grow as apples—just as safe in adapted sections, and just as sure croppers. They are equally suited to lawn or orchard growing. As they make a somewhat narrow tree they may be planted closer together, usually 20x25 feet apart, so are even better adapted to backyard culture. It is safest to plant two varieties for best pollination—although these pears are fairly self fertile. Add 10% if to go by mail.

Prices on Pears: Large size \$2.00 each; 2 for \$3.75; 3 (1 of each variety) only \$5.00

The Great New Pear BANTAM (Minn. No. 3)

The earliest, sweetest, hardiest, and quickest fruiter of the Pears.

Bantam is the new name just given to the Minnesota No. 3 Pear by its originators, the University of Minnesota. It is loudly acclaimed the finest, small hardy pear. Hardy enough for the Northwest. Has stood up well even far north in Minnesota.

The tree is vigorous, productive and entirely resistant to Pear Blight.

Bears very young. Large size trees frequently bear in the nursery row. The University experts recommend planting Bantam in ALL parts of Minnesota.

In size, as its name indicates, the fruit is similar to the famous Seckel Pear, but heavy production makes it "bushel up" as well as most larger fruiting pears. The quality is excellent as a dessert fruit—splendid for cooking and unsurpassed as a pickling pear. In color it is a yellowish-russet, sometimes with a light blush of pink. Season September 1st to 15th. Don't fail to plant this splendid new pear this year—but order early as supplies are limited.

MENDEL PEAR

39 Years Old and Still One of the Best

The original Mendel tree stands in an exposed location at New Ulm, Minnesota, and has for 39 years shown no winter injury nor trace of blight. The tree is a vigorous grower. The flowers are self-pollinizing; the fruit hangs well to the tree, is of fine quality, sweet and juicy, and keeps well into November. Fruits of Mendel are as large as those of the Bartlett and the tree has proven a good producer for many, many years.

Trees of Mendel Pear are bearing well throughout the southern part of Minnesota and are recommended by the University for planting as far north in Minnesota as Cass county. Plant Mendel now and enjoy your share of this, the finest of fruits for the North! We have fruited it since 1925—for 20 years.

PARKER PEAR

(Minn. No. 1)

Wonderful Pear Creation from the State Fruit Breeding Farm

This, Minnesota's largest named pear originated at the State Fruit Breeding Farm, has proven one of the most promising for pear culture in Minnesota. It was grown from a seed brought from Manchuria in 1909, and developed into a large, free-growing tree.

The fruit is medium to large. The flesh tender, almost melting, and the quality very good. In color it is yellow overlaid with a distinct blush. It is especially recommended for climates similar to central and southern Minnesota and in Minnesota has proven dependable in most sections as far north as Cass County. Season, early September.

Daniels HARDY CHERRIES

(Add 10% if to go by mail.)

You don't need an orchard to grow cherries, for the small size, attractive form, foliage and color of these trees make them valuable assets to any ornamental border.

The splendid cherries we list on this page have adequately proven their desirability both from the home garden or market point of view. With an assortment of these one can have the finest of cherries for eating and for canning.

Daniels Cherry Trees — propagated by the methods we use—have proven hardy throughout the Northwest and well on up into Canada.

Compass is the best pollinizer for the other cherries and should always be planted with them. Should you have an existing planting of cherries that is not fruiting well, plant some Compass along with them and you will be surprised with the way this correct pollinization will increase your yield.

Bearing age trees generally blossom the year planted and should fruit the year following without fail.

OKA, SAPA AND COMPASS PRICES (Not over 10 to a customer)

	1	5	10
Second Size	\$1.50	\$7.25	\$14.00
First Size	1.75	8.50	16.50
Bearing Size	2.00	9.75	19.00

OKA—A tremendous yielder of large round cherries fully one inch in diameter. Dark red outside with a juicy, purple meat inside. Wonderfully sweet. The best of all the purple fleshed cherries.

SAPA—Another excellent Cherry-plum hybrid with purple flesh and juice. Sapa is somewhat larger than Oka and has more of its plum parent characteristics. Bears at a very early age and is usually an annual bearer.

COMPASS—While this fine old variety is not the equal of the other two cherries in quality it is a most acceptable and popular fruit for canning. It is the best pollinizer known for the other cherries and should be included in all plantings.

CHERRY CULTURE

	Commercial	Home
Sapa, Oka, etc.	14 x 18 ft.	12 x 14 ft.
Korean	4 x 6½ ft.	3 x 5 ft.
Nanking	10 x 14 ft.	10 x 12 ft.

General culture of Cherries is the same as for plums. Pruning should encourage a low branched bush-like form and maximum percentage of young wood. Spray as in plums. It is well to plant a Compass as a pollinizer.

The New "Ornamental Fruiterers"

Korean Bush Cherry

(Improved Minnesota Varieties)

An absolutely new type in Bush Cherries. Very hardy, having been introduced from Korea. They form a small, neat, upright bush, very similar to Flowering Almond in appearance. They bear profuse crops of bright red cherries of from ½ inch diameter to the size of an Early Richmond. Some varieties are better for canning and some for eating. An excellent and attractive shrub for either ornamental or fruit planting. We offer two of the leading developments of the Minnesota Fruit Breeding Farm. Plant the two kinds for best pollination.

Minn. No. 23—An eating variety.

Minn. No. 20—Both an eating and canning variety.

Strong 2/3 ft. plants \$1.50 each; 1 of each for \$2.75.

Hansen's Bush Cherries

(Improved South Dakota Strains)

An improved bush cherry developed at the South Dakota station from the common Sand Cherry. A beautiful small shrub—compact bush, attractive foliage, gorgeous in bloom, and loads heavily with masses of beautiful little cherries early in the fruiting season. Excellent for jams and other culinary uses. Plant more than one for correct pollination.

18/24 inch plants \$0.75 each; 3 for \$1.75

2/3 foot plants \$1.00 each; 3 for \$2.50

3/4 foot plants \$1.50 each; 3 for \$4.00

The Nanking Cherry

(An Improved Minnesota Creation)

An outstanding ornamental and heavy producer of brilliant, useful fruit. The beautifully formed shrubs reach a height of about 7 feet and present an unusual combination of beautiful flowers (extra early), attractive foliage, with generous loads of brilliant, red cherries in early summer. The fruit is excellent for eating out of hand, or for jelly and canning.

We offer one of the best of the new improved Nanking Cherries developed by our University Experts, Minnesota Number 41.

Strong 2/3 ft. plants \$1.50 each.

Fruit Plants As Ornamentals

Fruit plants often work well into the ornamental planting. Gooseberries and currants may be used either in the informal border or for low, compact hedges. Red raspberries make a most attractive, taller hedge. Strawberries may be used as a low edging for the border or flanking a path. The cherries suitable to our Northwest climate may be used in place of a large shrub or small tree in the informal border. Plums may be used in the same way, allowing them more room, or used as small trees in the lawn—preferably to the side or rear. Apples, if allowed sufficient room, also may be used in the border but properly should be in the more open or lawn area because of their large ultimate size.

RED LAKE CURRANT

The Country's Finest Red Currant

This splendid currant is another triumph for the great Minnesota State Fruit Breeding Farm. University authorities and growers throughout the country agree that this is the finest red currant yet introduced. Wherever it has been tried it has met with instant favor—rapidly superseding older varieties in both home and commercial plantings.

Ripens early mid-season and holds on the bush for a long time without "shelling" or shriveling so it can be marketed when prices are highest. Always brings top prices. We consider it the most profitable, not only of all currants, but of all small fruits as well. Established plantings were producing from \$500 to \$1,000 per acre even at pre-Pearl Harbor prices, and the demand has been greater than the supply.

Stocks of this wonderful currant are limited so we urge early ordering.

RED LAKE PRICES

	1	5	10	25
1 year.....	\$0.40	\$1.60	\$2.85	\$5.75
2 year.....	.60	2.50	4.50	9.00
3 year.....	.70	3.00	5.50	11.00

Daniels Quality GOOSEBERRIES

PIXWELL GOOSEBERRY

"It picks so easy and so well
And yields enormous crops to sell."

A marvelous new gooseberry developed at the North Dakota Experiment Station.

We consider this the best of all gooseberries now available for general planting. It is an extremely easy variety to pick as the thorns are rather soft and not troublesome, and the berries hang on slender stems almost 2 inches below the twigs. Hardy, a vigorous grower, and one of the heaviest yielding gooseberries we have ever seen.

The berries are large, light green, ripening to a pinkish color. The fall foliage is an attractive bronze, making it an excellent plant in shrub borders or for use as a hedge.

Strong 2 yr. plants 90c ea; 5 for \$4.00; 10 for \$7.00

CARRIE (The Thornless Gooseberry)—For many years Carrie has been the most widely grown gooseberry here in the Middlewest. It forms a vigorous, healthy bush and is a sure, regular bearer of large crops of berries of medium size which turn reddish brown as they ripen.

2 yr. 75c each; 5 for \$3.25; 10 for \$6.00
3 yr. 90c each; 5 for \$4.00; 10 for \$7.25

CASCADE CURRANT

(Minnesota No. 70)

Another splendid Currant created by our Minnesota Fruit Breeding Farm. Just as hardy and productive as the Red Lake but larger in size and about a week earlier.

A more upright grower than Red Lake, but the bunches and the stem are both slightly shorter.

Those who crave the "ultra" in size and quality in a currant will want to plant Cascade.

Our stocks are very limited, so please order early.

CASCADE PRICES

1 year plants 60c each; 5 for \$2.50

Add 10% if items on this page are to go by mail.

DANNY SAYS:

Speaking on CURRANT events—no event in current currant history has been more important than the introduction of Red Lake and Cascade Currants. They're so big, so fine and so productive that I'm afraid that if I showed you our fruiting fields in full production you might still be inclined to "call me a liar."

GROW YOUR OWN STRAWBERRIES

- No fruit is more delicious—
- No fruit is easier to grow—
- No fruit gives more for so little space—
- No fruit produces so soon after planting—
- No fruit has higher Vitamin "C" content—

Strawberries have been so high priced the past two seasons that few people could afford them, even if they could find them. Shortage of labor and plants promise that this condition will continue for several seasons to come.

MORAL: GROW YOUR OWN!

Strawberries are easy to grow—they may be grown in a very limited space—and they produce so quickly. Everbearers planted this Spring will give abundant fruit **this same Summer and Fall.**

SO, Plant this Spring. But better order early as supplies are short.

How to Grow Strawberries

There are two distinct types of strawberry plants, based on their fruiting season, the Everbearing and the Junebearing. The Junebearing varieties produce a single heavy crop each year starting about the 10th to 15th of June here in the upper Mississippi valley. The first crop is produced the year following planting. The everbearing produces two crops each year. The first one starts within two or three months after planting. The second season the everbearing produces the regular June crop and then after a brief rest period starts again to produce the fall crop. In most varieties the fall crop starts to ripen in late July or early August and continues until fall frosts have destroyed the blossoms. The daily harvest of the fall crop is much lighter, plant for plant, than in the spring, but considering the length of season, frequently two or three months, the total amount is considerable.

Planting—Strawberries should be set out only in the spring, preferably late in April or early in May. The plants should be set with the

roots fully spread, the crown at the exact distance at which it grew previously and moist soil thoroughly packed against the roots.

Training System—The "narrow mat" row system of culture is generally the best for both home and commercial growers. The most satisfactory production is usually obtained where the runner plants are kept spaced at least five to six inches apart and where the width of the row is limited to approximately eighteen to twenty-four inches. Plants formed beyond these limitations are "weeds" in effect and should be eliminated. Probably the most widely used planting distances are as follows: Everbearers, 15 to 18 inches apart, rows 3 to 3½ feet apart; Junebearers, 18 to 24 inches apart, rows 4 feet apart. In small areas where hand culture methods are used, these planting distances may be considerably reduced to meet the limitations of the garden size.

Culture—Thorough, shallow, frequent cultivation should be started as soon as planting is completed and be continued until late September or early October. All blossoms should be removed from the Junebearing varieties the first year and from the everbearing varieties until the early part of July.

WE RECOMMEND GEM AS BEING THE MOST WIDELY SATISFACTORY EVERBEARING VARIETY FOR GENERAL USE.

Certified Strawberries

Sure to Grow—Sure to Bear

Daniels hardy, northern grown strawberry plants have been produced on specially selected and prepared soils to meet the needs of the planters here in the northwest. The most exacting care is exercised in every step of their growing, digging, handling and packing. When you buy Daniels plants you are buying strawberry satisfaction.

Everbearing Varieties

These varieties bear two crops a year. Plant this spring—pick this summer and fall until hard freezes kill all blossoms.

You'll get back the price paid for plants, and most important, a big profit in the first year besides. You'll harvest another fine crop the following June and fall—two crops in one year.

EVERMORE (Minn. No. 1166)—The first everbearer to be introduced and named by the Minnesota Fruit Breeding Farm in over 20 years. It must be, and is, good. Named just last winter. An excellent plant maker for an everbearer, and usually very productive. The quality is very good and slightly acid. Has shown extreme hardiness and high ability to resist drouth. Supply very limited. Order early.

GEM—Probably the most widely used and most generally planted of the older everbearers. Highly productive—a good plant maker, hardy, with large, bright red fruits slightly tart and of excellent quality. An ideal all-round berry for the Home Garden or the commercial grower.

PROGRESSIVE (Everbearing)—One of the oldest varieties, but still popular in many sections for home gardens. Not as vigorous a grower as Gem, berries smaller but of better quality.

Junebearing Varieties

Junebearers produce one crop each year—in June. Plants set out this spring will produce their first crop next year.

PREMIER—Aptly described as the one strawberry without a fault. Although nearly a week earlier than the old Dunlap and other Midseason varieties, it maintains a heavy production over a long period. The firm, bright red berries maintain their large size well throughout the season. An excellent canner. The most popular early and mid-season berry.

NOTE—Strawberry plants are very scarce this year. We suggest ordering early this year. Last year many were disappointed.

FOR THE TINIEST "FRUIT FARM"—

Although the everbearers are usually planted at least 15 inches apart, it is possible to put them a little closer and then remove all runners, growing the plants as individual "hills." In this manner really sizable crops may be produced in a very small area. The closer the plants are set, the more fertilizer, cultivation, and watering should be provided.

HOME GARDEN SPECIAL "C"
 25 Latham No. 1 Raspberry
 50 Gem Everbearing Strawberry
A \$6.20 Value Postpaid for Only \$4.75

LATHAM

The Country's Greatest Raspberry

In 1909 (37 years ago) I grew my first raspberry. In 1914 I was growing a considerable acreage of them—Cuthbert, Minnetonka Iron-Clads and others that have, for the northwest at least, gone the way of the one-horse shay. Shortly afterwards the University of Minnesota introduced the **Minnesota No. 4**. We were one of the first to plant it and have been growing it in large quantities ever since. Long ago it was named **Latham**—and **Latham**, to our way of thinking, is still the finest raspberry known. Not only in Minnesota, but in the entire fruit growing sections east of the Rockies, more Lathams are grown than all other varieties of red raspberries put together.

Latham is "tops" for the home garden or for the commercial grower. It is of high quality, large, productive, and hardy. Berries frequently measure an inch across. Yields of 200 to 400 crates per acre are not uncommon, and higher yields have been reported. It is a good shipper, it is a good canner, and it always brings top market price.

For the one best raspberry we say plant LATHAM.
Better order early, though.

DANIELS LATHAM PRICES

(Our Extra Select grade is the same as the one frequently called "2 year bearing age" in some catalogs.)

How to Grow Raspberries and Blackberries

The canes of these brambles live only two years. Each year new canes grow up from the ground produce their crop of fruit in the second year of their life and then die; later crops are produced from the subsequent, annually produced new canes.

Planting—The brambles may be planted in either spring or fall. They should be set 1 to 2 inches deeper than they originally grew and after planting the canes should be cut to a stump of from 2 to 4 inches in height. Fall-set plants should be mounded up with dirt, and each mound lightly mulched with manure or other material.

Planting Distances—

- Red Raspberries, Hill 4 by 6 or 5 by 5 ft.
- Hedge 1½ to 3 by 6 to 7 ft.
- Black Raspberries 3 to 4 by 6 to 7 ft.
- Blackberries 1½ to 3 by 7 ft.

Culture—Clean, thorough cultivation should start early in the spring and continue until the latter part of August. Later cultivation may induce later growth and resulting immaturity.

Red raspberries should be restricted to 5 to 10 canes to the hill, or in the hedge row system to a spacing of 6 to 8 inches apart in rows not over 10 inches wide. After each fruiting season the old canes (those which have borne) should be removed at the ground line. Before growth starts in the spring all weak and surplus canes should be removed at the ground and those remaining headed back somewhat—the amount depending upon the training and support system.

Raspberries fit in to even small properties as even a small area devoted to them can be highly productive. They may also be used as an effective hedge at the rear or side of a property—as a separation between the ornamental and vegetable areas of a garden—or as a hedge bounding or surrounding the vegetable garden.

DANNY SAYS:

Don't plant rubbish! Put it where it belongs. Put Daniels State Certified Mosaic Free Raspberries in your garden soil and throw diseased plants in the rubbish can.

Snyder Blackberries

The extreme popularity of this splendid blackberry is well deserved for it is not only the hardiest of the better blackberries but it is the best in quality. Plants are vigorous and very productive. Probably the best for home and commercial plantings in the North. 12 for \$2.00; 25 for \$3.15; 50 for \$5.40; 100 for \$9.50.

If Raspberries or Blackberries are to go by mail, add 10c per 25 (or less).

How to Grow Grapes

A strong two year plant is preferable to a younger or older one. Set the plant an inch or two deeper than it grew in the nursery row.

No matter how long the top is it should be cut back to two or three buds or eyes. The usual planting distance is from 8 to 10 feet apart in rows which are spaced at 8 feet.

Pruning—The pruning of a grape, perhaps the most important operation in its culture, is based upon the plant's growth and fruiting habit—a habit distinctly different from any other fruit. The fruit is all borne on shoots of the current season's growth.

For hardy varieties the 6- or 8-arm Kniffen system is most satisfactory. This system comprises a central upright trunk with three or four horizontal arms on each side of it. At each annual pruning there should be left on each of these arms approximately 3 to 3½ ft. of cane (strong wood of the past season's growth).

The tender grapes are usually trained to a horizontal arm spur system with the trunk running parallel to the ground and tied to the lower trellis wire in such a manner that it may be lowered to the ground for winter covering. From this arm a series of short spurs (bearing one year wood and buds for next year's shoots) is left at each pruning.

Cumberland Black Raspberries

Generally conceded to be the best of the "Black Caps." A vigorous grower and heavy yielder of large, juicy berries of the highest quality. Has stood the test of time. Most widely planted of all black raspberries. We offer strong two-year transplants at 12 for \$3.75; 25 for \$5.90; 50 for \$10.25; 100 for \$17.65.

DANIELS QUALITY GRAPES

Fresh, ripe, juicy grapes; vine ripened and melting in the mouth; beautifully colored twangy jelly; pure grape juices with the zip and zest that only grape juices may have; this may all be yours if you will but plant a few grape vines.

GRAPE PRICES

(Add 10% if Grapes are to go by mail.)

		1	5	10
ALPHA	2 year.....	\$0.55	\$2.50	\$4.75

DELAWARE	2 year.....	.75	3.25	6.00
NIAGARA	2 year.....	.75	3.25	6.00

THE HARDY GRAPES

This group of hardy fruits requires no winter protection and can be grown on a trellis, arbor or building with the same degree of safety as can the wild grapes.

BETA—About half way between the Concord and the wild grape in both size and quality and is a very heavy producer. A great favorite for jellies and wines.

ALPHA—Similar to Beta in hardiness, appearance, size and manner of growth but is generally considered to surpass it in quality. We recommend it as preferable to Beta for general plantings.

THE DESSERT GRAPES

For crop insurance these varieties should be given some winter protection. They should be laid down and covered with soil.

CONCORD—The most popular and widely grown of the blue table grapes. It is the standard of comparison for all other varieties.

DELAWARE—The finest Red grape. Although small in size it is unequalled in sweetness and spiciness.

NIAGARA—America's leading green grape. Very large and highly productive. Probably the finest of all the green or white grapes.

ASPARAGUS

Easy to Grow—and So Good for You
ONE PLANTING LASTS MANY YEARS

MARY WASHINGTON—This Giant Asparagus, the result of years and years of plant breeding work done by the United States Department of Agriculture, is everywhere admitted to be the finest asparagus grown. Mary Washington seems to be the ideal asparagus as it is rust-resistant and surpasses all other varieties in yield and quality. Its enormous tender shoots of vivid dark green retain their tenderness and do not branch until well above cutting height.

Our 3 year asparagus are truly fine. They are transplanted stock, very heavy and strong roots that will give fast growth and the earliest possible, time saving production.

MARY WASHINGTON ASPARAGUS PRICES

	12	25	50	100
3 year transplants.....	\$1.25	\$2.00	\$3.50	\$6.00
2 year plants.....	1.00	1.75	2.75	4.00

Add 10% if items on this page are to go by mail.

How to Grow Asparagus

Plant 12 to 18 inches apart in rows spaced at from 2 to 4 feet, the distance depending upon the method of cultivation and the space available. A trench should be dug so that the plants may be set with the crowns at least 6 inches below the ground level. The roots should be well spread—fan-like, horizontally—and only enough soil put back into the trench to cover the crowns one inch. If the trench is filled at this time the plants will probably be smothered. As the shoots start growth and attain some height, the trench may be gradually filled in. No stalks should be cut the first 2 years. Fertilize heavily for largest crops.

YOUR EARLIEST SPRING GARDEN REWARDS

HIGH VITAMIN LUSCIOUSNESS
Permanently yours from a Mary Washington Asparagus bed. Easy to grow!

RHUBARB

The New Chipman's CANADA RED RHUBARB

A new introduction from Canada, this variety is unquestionably the most beautifully colored, all red stem of any rhubarbs now grown. Stems are dark red way to the center and carry the color up into the leaf veins. Makes a beautiful, deep red sauce of sweet, mild flavor. Stocks very limited.

Strong divisions 90c each; 2 for \$1.75; 5 for \$4.00

MacDONALD—The finest of the large stalked, high quality rhubarbs. The planter who wants a rhubarb of high quality—good red color and heavy yield of large stalks, will find nothing better than MacDonald.

RUBY—A heavy producer with much higher coloring and better quality than McDonald. It excels all older Rhubarbs (Strawberry included) for cullinary uses because of its mildness and strong color. Stalks are somewhat smaller than those of McDonald. Plant Ruby freely for health-giving Rhubarb sauce, pies, and preserves.

Prices on Ruby and McDonald

	1	5	10
Strong Divisions	\$0.60	\$2.75	\$4.50
Medium Divisions50	2.25	4.00

How to Grow Rhubarb

Plants should be set 2 to 3 feet apart in rows 3 to 4 feet from each other. In the home grounds they may be tucked into openings in the border, or in corners or out of way places. The ground should be well enriched and spaded up. Set the root with the crown just below the surface. No stalks should be pulled the first year and only a few the second year. Mulching the ground with rotted manure in the fall and spading it into the soil in the spring will greatly increase production and the size and quality of the stalk. Plant only superior varieties as Ruby, McDonald and Canada Red.

PLANT ASPARAGUS AND RHUBARB AND ENJOY EARLY SPRING GARDEN HEALTH AND JOYS FOR YEARS AND YEARS TO COME.

FREE BOOK OFFER

(Expires March 15, 1946)

We want you to have one of these books, "Live At Home and Like It," FREE! Here's how:

1. Send in an order for \$10.00 or more for nursery stock (accompanied by payment in full) to reach us before March 15, 1946 and one of the books will be sent to you FREE by return mail.

2. Send in \$1.00 for the book, and with the book we will mail you a "credit memorandum" good for \$1.00 to be applied on any order for nursery stock for \$10.00 or more (accompanied by payment in full) which reaches us before March 15, 1946.

DON'T MISS THIS OPPORTUNITY
(Remember this offer expires March 15, 1946)

DANNY SAYS:

Search the libraries—but you'll find no other book so filled with helpful information for the northern planter, so carefully designed to orient the reader to plant life needs, and so definitely tailor-made for our Northwest conditions as the boss's "Live At Home and Like It."

PLANTING SERVICE

We invite those who wish to have their stock planted to avail themselves of the services of our skilled horticulturists. We can furnish these expert workmen in the Twin City area at the following rates: Evergreens at 40 per cent of the cost of the stock, and other stock at 60 per cent of the cost of the stock, except hedges which will be planted at 20 cents per foot. For the clients' protection our workmen are fully covered by Workmen's Compensation Insurance.

Daniels Liberal Guarantee

We exercise the utmost care in handling, labeling and packing our plants, guaranteeing them to be true to name, and will replace free of charge any plants which prove to be otherwise.

We guarantee that every plant we furnish is of the best quality for the grade you purchase, and in first class, live, growing condition. Nevertheless, The Daniels Nursery agrees to replace all plants (except strawberries) that fail to grow the first year at one-half the purchase price, provided that such failure to grow is not due to neglect or improper handling on the part of the purchaser. All replacement claims must reach us prior to October 1st of the fall following planting.

The above guarantee is void in case full payments of accounts are not made when due.

It is understood and mutually agreed between the purchaser and ourselves, that in no case will we be liable for more than the original cost of the plants. We cannot be held responsible for inability to make delivery because of strikes, fires, acts of nature, government regulations or limitations, or any other cause beyond our control.

TWO ANSWERS

TO THE EVER PERPLEXING GIFT PROBLEM
1—DANIELS GIFT CERTIFICATES

Our attractive "GIFT CERTIFICATES" allow the recipient a wide choice of plants (any of the hundreds of varieties we are growing) and an opportunity to choose those certain plants that they will most cherish. Why not ask for a sample "Gift Certificate?"

2—"LIVE AT HOME AND LIKE IT" . . .

A copy of this authentic and helpful horticultural handbook will delight any home owner—yes, any lover of plants.

DANIELS

LANDSCAPE MATERIALS

FERTILIZERS—Lawns, shrubs, trees, gardens, yes, all plants will be benefited by the judicious use of fertilizers. We carry a supply of those we consider best for general use, as **Loma, Milorganite, Bone Meal, Tree Food** and many other mixtures. Prices furnished upon application.

DIRT, PEAT and BARN YARD MANURE—We can supply excellent grades of these materials within reasonable trucking distances.

STONE—Stone for Walls, Rockeries and Flagstone work has been difficult to provide recently, but we anticipate a more available supply this year.

DANNY SAYS:

Write Plainly, Order Early and Rest Assured That You Will Have the Best Plants That Money Can Buy. Send all orders to

THE DANIELS NURSERY

Phone Long Lake 174

Long Lake, Minnesota

DANNY SAYS—

That's telling the world!

Mrs. R. D. T. of Hennepin County writes:

"The little book 'Live At Home and Like It' arrived in the mail a short time ago. We have both already looked it over with great interest and agree that it is a very helpful and interesting book, and is especially suited to our locality.

I might add that Mr. T. read the book quite thoroughly yesterday, and was loud in his praise of it. I have quite a lot of Garden Books—and hitherto I have never been able to interest him in reading even a chapter of any one of them—so your book has scored a big success! May it do so everywhere."

Are you satisfied with

The present condition, amount, kind and arrangement of

Your home ground plantings?

"Danny" does a little "Crystal Ball Gazing" and reads your mind!

"When I put in my 'original plantings' I did just part of a job. Why not finish the job now and make it a real home, outside as well as inside?"

"Some of my plantings are crowded, overgrown and in general do not give the effect I want. Why not do a little 'revamping' this spring with the additions necessary to make the planting just the way I want it?"

"I've always wanted a real perennial bed or rose garden—I need more shade—more evergreens for winter effect—additional borders for privacy—and some newer and better varieties. Why not do it this spring?"

"I'd like to grow some of my own fruits—but I don't know what or where to plant, and I don't know how to take care of them."

If "Danny" has read your mind correctly why not let us help you "Take Inventory" of your present plantings and suggest desirable improvements? We have the "Know How." (We're as near as your phone or mail box.)

DANNY SAYS:

Don't be caught asleep at the switch! Planting time will soon be here. Earlier plantings almost invariably do better than those which go in late in the season. Many items are scarce this year—and "first come, first served." Why not "play safe" and send your order in now?

**AND FINALLY
DANNY SAYS:**

Let's go Driving—driving home these five important points . . .

WHY BUY FROM DANIELS

● For 33 years we've furnished planters of the Northwest with reliable, hardy, acclimated plants of the best varieties for our exacting climatic conditions.

● Integrity and customer consciousness for that long period have developed a "customer confidence" that is in large measure responsible for our large volume of business.

● We are not primarily a "mail order house." Ninety percent of our business is done with our "neighbors"—those within easy driving range. And when one deals with neighbors one's stock must be good. We don't want to (and we couldn't get away with it if we did) put out the light or poorer grades of stock that are so frequently found in the "mail order" trade. **You'll like Daniels plants.**

● The most exacting care is used in digging, handling, grading and storing our plants. Our new, modern, refrigerated storage cellars insure delivery of plants in the "pink of condition." Our mechanical refrigeration system is one of the few (one other, as far as we know) used for nursery cellars in the Northwest.

● We want your business not only now but in the years to come—and every order is filled with that thought in mind. **You'll be satisfied when you buy from Daniels.**
